RULER

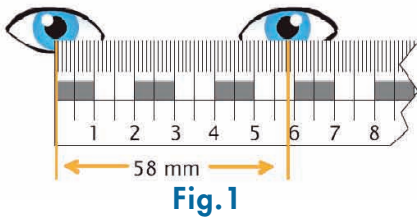

Fig. 1

HOW TO MEASURE YOUR PUPILLARY DISTANCE (PD)

To measure your PD, place the above ruler on the bridge of your nose (see Fig. 1) and have a friend measure the distance between the center of one pupil (the black dot in the middle of your eye) to the center of the other. You can also do it yourself by looking in the mirror.

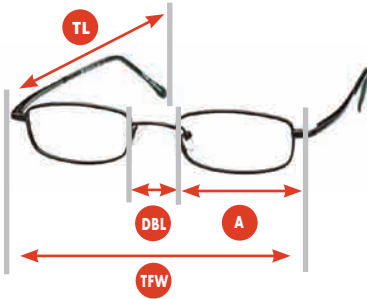

Fig. 2

HOW TO CHOOSE YOUR FRAME

FRAME SIZE EXAMPLE: 48-20-140

- A** (Eye Size) = 48mm
- DBL** (Distance Between Lenses) = 20 mm
- TL** (Temple Length) = 140 mm
- TFW** (Total Frame Width)

To help you make an easy decision, every frame is shown with its sizing information (see Fig. 2) The most important number is the Total Frame Width (TFW). You may use the above ruler to measure the TFW of your current eyeglasses (or the width of your face) to assist in choosing a frame that will best fit you.

LENS PACKAGES

SINGLE-VISION (for full-time distance, or for reading-only)

- (A) Clear Polycarbonate... no additional charge
